San Francisco, CA

PROFILE

Writer turned software engineer with a passion for building out clean and seamless user experiences.

EXPERIENCE

Software Engineer, [doctor.com](#); Cupertino, CA & Remote

September 2016 - January 2020

Worked primarily on the front end of a SaaS product built with JavaScript and PHP or Node on the backend. Early on, I worked closely with the CTO to hire and mentor two fellow junior developers, a senior dev, and establish a "Product" office in Cupertino. Together we rolled out countless new features in the form of 4 applications built with React, Redux, and TypeScript. Responsibilities also included maintaining a legacy PHP + Angular.js codebase and improving developer experience when not building out new features. Started at the company when <50 people, <\$5M revenue; as of 2019, company approached 200 employees, \$XXM revenue.

Software Engineer Intern, [doctor.com](#); Mountain View, CA

July 2016 - September 2016

Worked under the direction of a senior engineer and the CTO to create a new landing page for the company as well as restyle the doctor search and profile sections of the main website. My biggest contribution as an intern was building an online patient review system shipped as a chrome application to be used in doctors' offices across the country via a Chromebook in kiosk mode. The application featured the ability for users to store reviews offline and send them when connectivity reestablished.

Staff Writer, Well Made LLC; Santa Cruz, CA

January 2015 - February 2016

Content writer for [hopeculture.com](#) and the Wigglehop iOS app.

EDUCATION

University of California, Santa Cruz CA — B.A. Politics, 2014
